

# Mini RF interface for push buttons or switches, incl. battery

05-315

4 year warranty

The wireless transmitter interface for push buttons or switches converts the push-button or switching contacts into a wireless telegram:

- When connecting up to four push buttons: the wireless telegram is being sent as long as the push button is pressed (max. 10 s).

- When connecting up to two switches: the wireless telegram will be sent as soon as the contact is closed. When the contact is opened, a new telegram is sent. Any programming can be assigned when closing or opening the contact.

In combination with the Niko Home Control USB RF interface (410-00099), the hand-held transmitter can also be used in Niko Home Control installations.

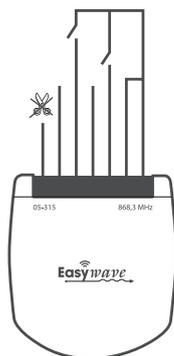

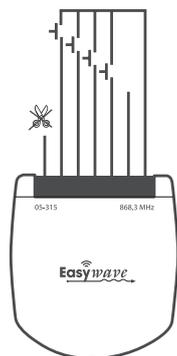

## Technical data

Mini RF interface for push buttons or switches, incl. battery

- Not compatible with the wireless bridge, compatible with the wireless smart hub
- Communication protocol: Easywave
- Weight: 15 g
- Dimensions (HxWxD): 37 x 30 x 9.8 mm
- Marking: CE
